

RISHABH DWIVEDI

Software Developer

+91-9118358910 — rd1538350@gmail.com — [LinkedIn](#) — [GitHub](#)

Professional Summary

Software Developer with 6+ months of production experience designing and deploying scalable FastAPI microservices on AWS. Specialized in building high-performance REST APIs, real-time systems, and LLM-integrated applications. Proficient in async Python (asyncio), database optimization (PostgreSQL, MongoDB), containerization (Docker), and security best practices (JWT, OAuth, rate limiting). Proven ability to architect systems handling 10K+ concurrent requests with sub-100ms latency. Strong foundation in data structures, algorithms, system design, and full-stack development.

Technical Skills

Languages: Python, JavaScript, C++

Frameworks & Libraries: Node.js, Express.js, FastAPI, Django, Flask

Databases & APIs: PostgreSQL, MongoDB, MySQL, REST API, JWT, OAuth, WebSockets, SQLAlchemy

AI/ML: RAG, Agentic AI Workflows, Prompt Engineering, LangChain, LLM API Integration

Tools & Cloud: Linux, Git, GitHub, Docker, Postman, CI/CD, AWS (S3, EC2), Vercel, Render

Fundamentals: Data Structures, Algorithms, OOP, System Design, Microservices Architecture, API Design

Professional Experience

Python Development Intern

January 2026 – April 2026

Codveda Technologies, Remote

- Built and integrated REST APIs implementing CRUD operations for seamless data exchange between backend services and databases.
- Implemented rate limiting on API endpoints to prevent abuse and ensure stable performance under high request loads.
- Automated repetitive data-handling tasks using Python, reducing manual processing effort by an estimated 30–40%.
- Collaborated with the development team using Git for version control, contributing to iterative script improvements.

Python Developer Intern

May 2026 – July 2026

Infotact Solutions, Remote

- Developed Python automation scripts that streamlined repetitive manual tasks across daily data workflows.
- Partnered with a 4-member engineering team to identify automation opportunities and translated requirements into production-ready scripts following SDLC best practices.
- Tested automation scripts across multiple input formats and edge cases, ensuring reliable execution in production environments.

Projects

NEXUS AI — Intelligent Chatbot Platform

June 2026

React.js, Node.js, Express.js, MongoDB, Socket.io, Gemini AI, LangChain

[Live Demo](#) — [GitHub](#)

- Architected real-time AI chatbot backend integrating Google Gemini 1.5 Flash API with WebSocket (Socket.io) bidirectional communication and JWT-based authentication, handling 1K+ concurrent users with sub-200ms response latency.
- Implemented MongoDB Atlas persistence layer for chat history with rate limiting (token bucket algorithm), input sanitization, and Helmet.js security headers to prevent abuse and ensure production-grade security.
- Deployed scalable microservices architecture on Render (backend) and Vercel (frontend) with environment-based configuration, API key protection, and payment integration flow for premium subscription plans.

ResumeX — AI Resume Matcher

August 2026

Python, FastAPI, Vector Database, LLM API, PostgreSQL

[Live Demo](#) — [GitHub](#)

- Developed FastAPI backend for semantic resume-job matching using vector embeddings and similarity search across 10K+ resume database.
- Integrated vector database for sub-100ms semantic search queries with 95%+ relevance accuracy.
- Implemented LLM-powered skill extraction pipeline using LangChain and prompt engineering to parse resumes and job descriptions.
- Designed scalable REST API with rate limiting, JWT authentication, and async processing for batch resume uploads.
- Optimized database queries reducing search latency from 500ms to 50ms through vector indexing and query optimization.

SentriGate AI — Intelligent API Security Gateway

August 2026

Python, FastAPI, Redis, PostgreSQL, Scikit-learn, JWT, Docker

[GitHub](#)

- Engineered an AI-powered API security gateway using FastAPI to authenticate, validate, and secure incoming requests before routing them to backend services.
- Implemented JWT-based authentication, request validation, and Redis-based rate limiting and caching to improve API security, performance, and reliability.
- Built an ML-based anomaly detection pipeline to analyze API traffic patterns and identify suspicious requests for automated allow/block decisions.
- Designed a scalable and modular backend architecture using PostgreSQL, asynchronous processing, and Docker, following API Gateway and microservices principles.

Certifications and Training

Data Analytics Job Simulation, Deloitte (via Forage)

November 2025

- Completed a virtual job simulation covering data analysis and forensic technology tasks on datasets exceeding 100,000 records, applying structured problem-solving to identify data inconsistencies.

Education

Dr. APJ Abdul Kalam Technical University

Lucknow, India

Bachelor of Technology in Computer Science and Engineering

Expected: June 2028
